

Colombia 2010

1 Survey Description

Survey: Encuesta Nacional de Calidad de Vida (ENCV), carried out by the National Department of Statistics (DANE) of Colombia, for the year 2010.

Sample: The survey was conducted between the September 1th 2010 and the October 31th 2010. The ENCV collects information from 9 regions (62,682 individuals) and is nationally representative. The sample considered is restricted to adult individuals aged 22 to 55 with information about outcome and circumstances, 33,899 individuals in the total sample and 25,928 individuals in the analysis sample. Section 3 of this document describes the prevalence and pattern of missing data.

Weights: The weights are the inverse of the probability that the observation is included because of the sampling design. It could be understood as the number of individuals in the population that an individual represents in the sample according to the 2005 Population Census and demographic projections (*weights*).

Outcome: The outcome variables are annual equivalized household disposable total (*eq_iinc*) income in dollars PPP 2017.¹

Circumstances:

- Sex (female, male)
- Race ‘Ethnicity’ (indigenous, afro-descendant and others, described in Table 1)
- Father’s edu. (years of education (maximum 15), described in Table 2)
- Mother’s edu. (years of education (maximum 15), described in Table 2)
- Birth Place (urban vs rural, described in Table 1)

¹Income variable was equivalized using the square root scale.
