Sample: Understanding Society is a longitudinal, household panel, multi-scope study conducted by the Institute for Social and Economic Research at the University of Essex. The Study began in 2009 as a continuation of the British Household Panel Study (BHPS), which ran from 1991 to 2008. The Understanding Society sample design consists of four components: the General Population Sample (GPS), the Ethnic Minority Boost Sample (EMBS), the former British Household Panel Survey (BHPS) sample, and the Immigrant and Ethnic Minority Boost Sample (IEMBS). . There are 47,279 individuals in the total sample and 15,308 individuals in the analysis sample. Section 3 of this document describes the prevalence and pattern of missing data.

Weights: Understanding Society employs a probability sampling approach with a complex sample design, incorporating clustering and stratification, and includes unequal selection probabilities to ensure representation of population subgroups. The GPS uses a proportionately stratified, clustered sample of residential addresses from the Postcode Address File in England, Scotland, and Wales, and an unclustered systematic random sample from the Land and Property Services Agency list in Northern Ireland. The weights account for this stratification.

Outcome: The outcome variables are annual equivalized household disposable total income in dollars PPP 2017.¹

Circumstances:

- Race/Ethnicity (described in Table 1)
- Sex (female, male, in Table 1)
- Fathers's edu. (4 levels of education, described in Table 2)
- Mother's edu. (4 levels of education, described in Table 2)
- Father's occ. (8 categories NSSEC, described in Table 3)
- Mother's occ. (8 categories NSSEC, described in Table 3)

¹Income variable was equivalized using the square root scale.

2 Descriptive Statistics

Table 1: Respondant's socio-demographics - 2009

	Analysis sample	Total sample
	(N=15,308)	(N=47,279)
Gender		
0 Male	6,504 (42.5%)	20,786 (44.0%)
1 Female	8,804 (57.5%)	26,493 (56.0%)
Ethnicity		
1 Black	670 (4.4%)	2,626 (5.6%)
2 White	13,614 (88.9%)	37,902 (80.2%)
3 Asian	724 (4.7%)	5,312 (11.2%)
4 Mixed	228 (1.5%)	864 (1.8%)
6 Other	72 (0.5%)	527 (1.1%)

3 Missing data analysis

3.1 Missing patterns

Figure 1: Missing patterns: *Left*: Marginal distribution of missing observations per variable. *Right*: Combination of missingness across cases

3.2 Differences in expected total equivalized household income between samples

Figure 2: Differences in expected total equivalized household income between the sample with non-missing circumstances and the total sample

3.3 Gini coefficient

Table 5: Gini coefficient in analysis sample and total sample

Wave	Sample	Gini	Lower bound	Upper bound	Average income
Wave 2009	Analysis sample	0.345	0.341	0.353	54,320
Wave 2009	Total sample	0.366	0.364	0.371	48,083
